Executive Summary

This document presents a preliminary analysis of the proposed Customer Relationship Management (CRM) system demonstrated by SHARKONIX TECHNOLOGIES (PVT) LTD.

The purpose of this document is to:

- Summarize the proposed solution
- Identify the agreed functionality
- Define the initial project scope
- Establish the next steps

This document does not constitute the final software specification. Upon approval, SHARKONIX TECHNOLOGIES will prepare the final Software Requirements Specification (SRS), project quotation, implementation schedule, and development agreement.

1. Introduction

1.1 Purpose of this Document

This document defines the purpose, scope, requirements, and technical approach for a demo Customer Relationship Management (CRM) system. The demo will be used in live meetings to present CRM capabilities to prospective customers and gauge their interest before committing to a full production build.

1.2 Background

The business intends to showcase a working, click-through CRM to prospects during sales meetings. Rather than a paper pitch deck, a functioning demo allows prospects to see the product's core value (organizing leads, tracking deals, and automating follow-up work) in a realistic setting. If a customer expresses interest, the demo becomes the starting point for a scoped, budgeted production build — with an optional companion mobile app if the customer's budget allows.

1.3 Intended Audience

- Client decision-makers reviewing and approving scope before development begins
- The Sharkonix development team building the solution
- Prospective customers, as the consumers of the resulting product

2. Objectives

The demo must accomplish the following:

1. Demonstrate core CRM workflows convincingly in a live, in-person or screen-shared meeting.
2. Be built quickly, using a lean stack, without full production concerns (auth hardening, billing, multi-tenant data isolation, etc.).

3. Be visually polished enough to be mistaken for a finished product.
4. Be structured so it can evolve into a real, customer-specific product without a rewrite, if a deal is won.
5. Leave room to pitch a mobile companion app as a paid, optional phase 2.

3. Expected Business Benefits

The proposed CRM system is expected to:

- Reduce manual work
- Improve customer management
- Increase sales conversion rates
- Track customer communications
- Improve follow-up efficiency
- Provide management reporting
- Centralize customer information
- Improve productivity

4. Scope

4.1 In Scope (Demo Build)

- Web application, desktop-first responsive layout
- Mocked or lightly-seeded sample data (fictional contacts/companies/deals) for demo storytelling
- Core CRM modules: Contacts, Pipeline/Deals, Activities, Tasks, Dashboard
- Single demo user role (no multi-tenant customer accounts yet)
- Deployed to a shareable URL for use in and between meetings

4.2 Out of Scope (Demo Build)

- Production-grade authentication, billing, and subscription management
- Real email/calendar/telephony integrations (will be simulated in the UI)
- Multi-tenant customer data isolation
- Mobile app (proposed as an optional, separately scoped and budgeted Phase 2)
- Data migration tooling, imports/exports, and admin back-office tooling

4.3 Assumptions

- Demo will be presented primarily by the Sharkonix sales team, not self-served by prospects unsupervised.
- No real customer data will be entered into the demo environment.
- A production build, if commissioned, will be scoped and planned separately once a customer signs on.

4.4 Constraints

- Timeline: demo needed quickly, ahead of upcoming customer meetings.
- Budget: minimal — favor free/low-cost hosting tiers and open-source tooling.
- Team: small team/solo build; stack choices should minimize setup overhead.

5. Stakeholders

Stakeholder	Role	Interest
Business Owner / Sales Lead	Demo presenter, decision-maker	Needs a reliable, impressive demo that closes deals
Development Team	Builds and maintains the demo	Needs a lean, fast-to-build, extensible stack
Prospective Customers	Demo viewers / evaluators	Needs to see clear value and a believable, usable product

6. Functional Requirements

The table below lists the functions the demo must support, grouped by module, with priority for the initial build.

Module	Function	Priority
Contacts / Leads	Create, view, edit, tag, and search contacts and companies	Must-have
Contacts / Leads	Custom fields per contact (industry, source, deal size, etc.)	Should-have
Pipeline / Deals	Kanban-style drag-and-drop deal board across pipeline stages	Must-have
Pipeline / Deals	Deal detail view with value, stage, close date, owner	Must-have
Activities	Log calls, emails, meetings, and notes against a contact/deal	Must-have
Activities	Chronological activity timeline per contact	Must-have
Tasks	Create follow-up tasks/reminders with due dates	Must-have
Automation	Simple rule: e.g. moving a deal to a stage auto-creates a task	Should-have
Dashboard	Summary charts: pipeline value, deals won/lost, funnel view	Must-have
Email (simulated)	Compose/"send" an email from a contact record (UI only)	Should-have
Payments	Send advance/full payment links, track payment status, generate receipts	Must-have
AI assist	Suggested next action or auto-summarized notes on a contact	Nice-to-have
User & Roles	Basic login and a role concept (admin/rep) for demo realism	Nice-to-have

7. Non-Functional Requirements

- **Usability:** the interface must be understandable within seconds by someone who has never seen it — no onboarding walkthrough during a live pitch.
- **Performance:** pages should load in under 2 seconds on typical business WIFI/4G.
- **Reliability:** the demo must not error out mid-presentation; seeded data should always be present on load.
- **Portability:** must run in any modern browser, on desktop and tablet, with no install.
- **Maintainability:** codebase should be structured so it can be extended into a real product without a full rewrite.
- **Security:** minimal but present — no real customer or payment data should ever be enterable in the demo environment.

8. Proposed System Architecture

8.1 Architecture Overview

A standard three-tier web architecture is proposed: a browser-based frontend, an API backend, and a relational database. For the demo phase specifically, the backend/database layer may be simplified or mocked entirely to accelerate delivery, with a clear upgrade path to the full three-tier setup for a production build.

8.2 Recommended Technology Stack

Layer	Technology	Why
Frontend	React (Next.js)	Fast to build dashboard/table-heavy UIs; large ecosystem; reusable across a future mobile app
Backend (if built)	Node.js (NextJS) or Python (FastAPI)	NextJS if team is JS-first; FastAPI if AI features are likely within the next 1-2 years
Database (if built)	PostgreSQL	Flexible schema via JSONB for custom fields; industry-standard, free, well-supported
Demo-only data layer	Mocked/seeded JSON data in the frontend	Skips backend/database setup entirely for the fastest possible demo build
Hosting	Vercel (frontend) + Railway/Render (backend, if used)	Free/low-cost tiers, deployable same-day, shareable link
Mobile (Phase 2, optional)	React Native	Reuses React business logic and API layer from the web app

8.3 Build Approach for the Demo

To meet the speed and budget constraints, the demo will be built as a frontend-only application with realistic mocked/seeded data, rather than a full client-server system. This removes backend hosting, database setup, and

authentication concerns from the critical path while still producing a fully interactive, click-through experience suitable for live presentation. A real backend and database are added only once a customer commits to a production build.

9. Preliminary Data Model

Core entities anticipated for the demo, shown with their key attributes and relationships:

Entity	Key Attributes	Related To
Contact	name, company, email, phone, tags, custom fields	Deals, Activities, Tasks
Company	name, industry, size, website	Contacts
Deal	title, value, stage, close date, owner, contact	Contact, Activities, Tasks, Payments
Activity	type (call/email/meeting/note), timestamp, body	Contact, Deal
Task	title, due date, status, assignee	Contact, Deal
Payment / Receipt	receipt number, amount, type (advance/full/balance), gateway, date	Deal
User	name, email, role	Deals (as owner), Tasks (as assignee)

10. Optional Mobile App (Phase 2)

A mobile companion app is proposed as an optional, separately budgeted addition once a customer commits — not part of the initial demo.

- **Purpose:** allow field sales reps to view contacts, update deal stages, and log activities from a phone.
- **Technology:** React Native, to reuse the web app's business logic and API layer.
- **Budget-conscious alternative:** a Progressive Web App (PWA) — installable from the browser, works reasonably offline, no app store approval process — as a cheaper stand-in if budget is limited.
- **Sequencing:** proposed strictly as a phase 2 item, scoped and priced after the customer has seen and approved the core CRM demo.

11. Deliverables

If approved, SHARKONIX will provide:

- Web CRM System
- Source Code
- Deployment
- Basic Documentation
- User Training

- Warranty Period
- Bug Fixes
- Technical Support

12. Project Exclusions

The quotation does not include:

- Domain purchase
- Hosting charges
- Third-party API subscriptions
- SMS charges
- Email service costs
- Google Workspace
- Microsoft 365
- Future feature requests
- Hardware purchases

13. Risks & Mitigations

Risk	Impact	Mitigation
Demo breaks or shows blank data mid-meeting	High — undermines credibility live	Use static seeded/mock data; test the exact demo flow before every meeting
Scope creep turns "demo" into a half-built product	Medium — delays delivery	Freeze the Section 4.1/4.2 scope split; treat anything extra as Phase 2
Prospect asks for a feature not in the demo	Low — expected in sales conversations	Maintain a visible backlog; respond as "available in the full build"
Free-tier hosting limits hit during multiple demos	Low	Monitor usage; upgrade tier only if it becomes a real constraint

14. Feasibility Summary

- **Technical feasibility:** High. The proposed stack (React/Next.js, optionally Node/Python + PostgreSQL) is mature, well-documented, and suited to fast MVP/demo delivery.
- **Operational feasibility:** High. A frontend-only, mocked-data build requires no ongoing backend operations for the demo phase.
- **Economic feasibility:** High. Free-tier hosting (Vercel) and open-source tooling keep costs near zero for the demo phase; costs only grow once a production build with a real backend is commissioned.

15. Acceptance Criteria

The project shall be considered complete when:

- ✓ All agreed features have been delivered
- ✓ Client has completed testing
- ✓ Critical defects are resolved
- ✓ Client provides written acceptance

16. Change Management

Any functionality requested after approval of this document may:

- Affect the project scope
- Affect the delivery schedule
- Affect the project cost

Such changes shall require written approval from both parties.

17. Commercial Note

A detailed commercial quotation will be provided after approval of the finalized system requirements.

18. Next Steps

6. Stakeholder review of this document — add, remove, or adjust scope and requirements above.
7. Return the revised document for final confirmation.
8. Begin the demo build directly from the confirmed scope (no separate project plan, per direction).

19. Confidentiality, License and Approval to Proceed

19.1 Confidentiality & Ownership

This document, including all its contents, diagrams, requirements, and attachments, is the exclusive intellectual property of SHARKONIX TECHNOLOGIES (PVT) LTD. It is provided solely for the purpose of client discussion and presentation of the demo CRM described herein.

Reproduction, copying, distribution, or sharing of this document, in whole or in part, with any third party without the prior written consent of Sharkonix Technologies (Pvt) Ltd is strictly prohibited.

The client agrees not to copy, distribute, reproduce, reverse engineer, or commercially exploit any concepts, workflows, UI designs, documentation, or software demonstrated by SHARKONIX TECHNOLOGIES without prior written permission.

PROPERTY OF SHARKONIX TECHNOLOGIES (PVT) LTD — UNAUTHORIZED SHARING IS PROHIBITED

19.2 Authorized By

For and on behalf of,

SHARKONIX TECHNOLOGIES (PVT) LTD

Email: founder@sharkonix.com

Phone: +94 720 994 955

Company Seal: _____

Date: July 17, 2026

19.3 Client Approval to Proceed

The undersigned acknowledges that:

- The demo has been presented.
- The proposed scope has been discussed.
- Additional features may be added or removed during the detailed requirement analysis.
- The final quotation will be based on the agreed scope.
- Signing this document does not authorize software development or create a purchase obligation.
- A separate Software Development Agreement (SDA) or Service Agreement will be executed before development begins.
